CURA E MANUTENZIONE**ALLUMINIO**

Per mantenere pulito l'alluminio è sufficiente una bacinella con acqua pulita tiepida, un detergente solido o liquido neutro – non abrasivo e non a base di ammoniaca, candeggina o alcool – panni morbidi e una spugna non abrasiva. Utilizzare il panno morbido per asciugare ed evitare la formazione di aloni. Si raccomanda di utilizzare solo acqua tiepida a temperatura massima di 30°. Nel caso di macchie persistenti utilizzare una soluzione di aceto, sapone di Marsiglia neutro o bicarbonato (un cucchiaino di sapone/bicarbonato per ogni litro di acqua).

CARE AND MAINTENANCE**ALUMINUM**

To maintain the aluminium clean use a basin with warm clean water, a solid or neutral liquid detergent (non-abrasive and not ammonia, bleach or alcohol-based) soft cloths and a non-abrasive sponge. Use a soft cloth to prevent halos. It is recommended to use only lukewarm water (maximum 30°C). In case of persistent stains use a solution of vinegar, neutral Marseille soap or bicarbonate (a spoonful of soap/bicarbonate for each liter of water).
